

How to insert the cable into the fiber optic terminal box

Article Overview

Installing cables in a fiber optic terminal box requires careful routing, secure mounting, proper splicing or termination, and testing to ensure reliable signal transmission.

Step 1: Prepare the Installation Site

Choose a location that is easily accessible and suitable for the environment (indoor or outdoor). For outdoor boxes, ensure weatherproofing and UV resistance; for indoor boxes, select a protected corridor or telecom room. Mark and drill holes for mounting, using appropriate anchors for the wall type, and ensure the box is level and stable .

Step 2: Prepare the Fiber Optic Cables

- Inspect cables for damage and lay them flat for handling .
- Strip the outer jacket, buffer layer, and coating carefully using a fiber stripper, avoiding nicks or scratches .
- Cleave the fiber ends cleanly with a fiber cleaver and clean them with alcohol or a specialized cleaner .
- Leave a service loop (10-15 cm) inside the box to allow slack for future maintenance .

Step 3: Insert Cables into the Box...
