

How to locate the exact position of an optical cable

Overview

Cable locating equipment can help identify the exact location of buried fiber optic cables. Ground penetrating radar and electromagnetic field detection can help locate underground fiber. It is often necessary to locate buried optical fiber cable to prevent dig-ups during construction, to access fibers for termination, to effect repairs, or for other reasons. These include, but are not limited to:.. Fiber optic cables are critical components of modern communication infrastructure, often buried underground for protection and durability. However, locating these cables can be challenging without the right tools and knowledge. Damaging these lines during. The FLS-2 is a high-performance, long-distance fiber-optic cable locating and monitoring transmitter. The set is designed for accurate location of underground utilities and their depth measurement (power/signal cable lines, armored fiber optic cables, pipes made of conductive materials), search for faults of cable lines, allows.
