

Huawei Switch 2300 Fiber Port

Article Overview

Huawei S2300 series switches support fiber uplinks through SFP modules, primarily on Enhanced (EI) models for flexible network expansion.

Fiber Port Support

The Huawei S2300 series, including models like the S2326TP-PWR-EI, is primarily a Fast Ethernet switch designed for enterprise campus and carrier-class access networks. While the standard (SI) models focus on basic Layer 2 access with 10/100 Mbps copper ports, the Enhanced (EI) models provide additional features such as advanced VLAN (QinQ), QoS, security, and uplink fiber port support .

- **SFP Uplink Ports:** The EI models typically include 1 or 2 SFP slots for fiber connections, allowing integration with Gigabit or Fast Ethernet fiber links. These slots support standard SFP modules, which can be multi-mode or single-mode, depending on the network requirements .
- **Port Speeds:** While the main switch ports are 10/100 Mbps, the SFP uplinks can support 100 Mbps or 1 Gbps, depending on the SFP module used .
- **Flexibility:** Using SFP modules, the S2300 can connect to other switches, routers, or fiber backbone networks, providing scalable uplink options for campus or small enterprise deployments .

Additional Features Relevant to Fiber Use

- **Fan-free design** reduces mechanical failures and ensures stable operation in environments where dust or condensation may affect fiber connections .
