

Huijue cable trays include support brackets or not

Article Overview

Cable trays, including those from Huijue, typically do not include support brackets; these are considered separate accessories that must be purchased and installed to secure the tray.

Industry Standard Practice

Cable trays are designed to route and organize electrical or data cables, but they are generally supplied as the tray sections themselves without the supporting hardware. Support brackets, hangers, and other mounting elements are classified as accessories or support elements, which are used to attach the tray to walls, ceilings, or other structures and maintain proper spacing and stability .

Types of Support Brackets

Support brackets come in various designs to suit different installation needs:

- L-brackets and U-brackets: Wall-mounted or ceiling-mounted supports for short to medium spans .
- Cantilever arms: Extend the tray from a wall or structure to support longer spans .
- Trapeze hangers and center supports: Used for overhead installations, especially for long runs . The support spacing—the distance between brackets—is determined by the tray type, load, and installation environment, and it is critical for structural integrity
