

Indoor butterfly-shaped drop fiber optic cable

Overview

FTTH Butterfly Optic Cables, also known as flat drop fiber cables, feature a compact flat profile with optical fibers placed at the center and reinforced by parallel strength members on both sides. Their flat, butterfly-shaped structure combines optical fibers with strength members, making them ideal for indoor wiring, drop cable installations, and last-mile network. Butterfly FTTH drop cable is a popular type of fiber access optical cable, according to the different application environment and laying conditions, it has reasonable design of cable structure and technical parameters. Designed for tight turns, safe routing near power, and fire-aware buildings. It offers an efficient and economical solution for deploying fiber in FTTH network. Central loose tube cables and self-supporting FTTH drop cables are designed for outdoor aerial distribution.
