

Indoor double-row distribution box

Article Overview

A double-row indoor distribution box is a wall-mounted electrical enclosure designed to house multiple circuit breakers or modules, providing organized power distribution for indoor applications.

Overview

A double-row indoor distribution box is typically used in residential, commercial, or light industrial settings to safely distribute electrical power across multiple circuits. It is designed with two rows of modules, allowing for a higher number of circuit breakers or protective devices in a compact space. These boxes are often made from halogen-free, UV-stabilized ABS plastic or metal, ensuring durability and safety.

Key Features

- **Module Capacity:** Commonly available in configurations ranging from 24 to 54 modules, depending on the model.
- **Protection Rating:** Indoor boxes usually have an IP40 rating, protecting against dust and accidental contact, while some models offer IP65 for higher protection against moisture.
- **Doors:** Transparent or slightly darkened doors allow easy inspection of internal components without opening the box.
- **Mounting:** Wall-mounted with pre-installed mounting rails and terminals for quick installation.
- **Cable Entry:** Multiple knockouts or pre-drilled holes at the top, bottom, and sides for flexible cable routing
