

Indoor electrical distribution box fire

Overview

The most common cause of distribution box fires is overloading. When the total wattage of your appliances (water heaters, induction cookers, dishwashers, refrigerators, etc. Often, homeowners are unaware that the root cause lies hidden behind the panel, in the quality of the Molded Case Circuit Breaker (MCCB). In 2020-2024, local fire departments responded to an estimated annual average of 46,652 home electrical structure fires. The 2020 edition of the National Fire Protection Association NFPA 70 National Electrical Code is hereby adopted as the minimum requirements for the design, installation, alteration, or repair of electric wires and wiring apparatus and other appliances used or to be. NEC Article 314 establishes requirements for the installation and use of electrical boxes, conduit bodies, fittings, and handhole enclosures. When a circuit breaker trips, it releases a cocked spring mechanism that separates the electrical contacts.
