

Inspect the on-site power distribution box

Article Overview

Inspecting a power distribution box involves a systematic check of connections, breakers, wiring, surge protection, and overall cleanliness to ensure safe and reliable operation.

Safety First

Before starting, ensure personal protective equipment (PPE) is worn, including safety glasses, insulated gloves, and appropriate footwear. Confirm that the area is safe and, if necessary, de-energize the box according to standard lockout/tagout procedures .

Visual Inspection

- Check for dust, debris, and corrosion inside and outside the enclosure .
- Inspect circuit breakers for proper operation and signs of wear or damage .
- Look for burnt or damaged wiring and discoloration that may indicate overheating .
- Examine surge protection devices to ensure they are functional .
- Inspect bolted connections and torque-test them to manufacturer specifications .
- Check indicators, lights, and meters for proper operation .
- Verify locking mechanisms and panel integrity for safety .
