

Install lights in the distribution box

Article Overview

To install lights on a distribution box, you need to connect a low-power lighting circuit to the distribution board using proper protective devices, ensuring correct phase, neutral, and earth connections.

Safety First

Before starting, turn off the main power supply to the distribution board to prevent electric shock. Use insulated tools and wear protective gloves. Ensure the distribution box is properly earthed, as this is critical for safety when adding any electrical device .

Choosing the Light and Circuit

- Use low-wattage LED or indicator lights suitable for 230V AC (or your local supply voltage) to minimize heat and power draw .
- Decide whether the light will be internal (inside the DB for visibility) or external (mounted above or near the DB).
- The light should be connected to a dedicated lighting subcircuit or an existing lighting circuit with an appropriate MCB rating .

Wiring Steps

- Identify the Phase, Neutral, and Earth terminals in the distribution box. The phase wire comes from the output of an MCB, the neutral from the neutral link, and the earth from the earth link .
- Connect the phase wire from the MCB to the live terminal of the light....
