

Installation of Level 2 Cabinet Distribution Box

Article Overview

A Level 2 cabinet distribution box should be installed in a dry, accessible location with proper grounding, surge protection, and neatly organized wiring, following all relevant electrical codes and safety standards.

Pre-Installation Preparation

Before installation, ensure the site is ready: walls and ceilings should be finished, the floor leveled, and any embedded conduits or foundation steel inspected and approved . Select a location that is dry, ventilated, and away from flammable, corrosive, or explosive materials . Confirm the box size, model, and number of circuits based on load requirements and future expansion . Prepare tools such as screwdrivers, wire strippers, multimeters, and insulation testers, and ensure all materials, including wires, terminal blocks, and mounting brackets, meet electrical specifications .

Mounting and Positioning

Install the distribution box at an appropriate height, typically around 1.5 meters, ensuring it is stable and level . Use galvanized bolts and anti-loosening washers for secure attachment . For flush-mounted boxes, ensure the cover fits closely to the wall and openings match conduit diameters . Outdoor boxes should have suitable IP or NEMA ratings (e.g., IP66 or NEMA 4X) to protect against dust, water, and UV exposure
