

Installation of column-mounted distribution boxes

Article Overview

Column-mounted distribution boxes should be installed at a safe, accessible height with proper grounding, secure mounting, and compliance with electrical standards to ensure reliable and safe power distribution.

Site Selection and Placement

Choose a dry, well-ventilated, and accessible location close to the main power supply to minimize power loss and facilitate maintenance . Avoid areas with high humidity, corrosive substances, or flammable materials . For outdoor installations, ensure the box has an appropriate IP or NEMA rating to protect against water and dust ingress . The location should allow easy access for electricians and maintenance personnel while keeping a safe distance from potential hazards .

Mounting Height and Fixing

The bottom edge of the distribution box is typically installed 1.5 to 1.8 meters above the ground, which allows convenient operation and inspection . Use a firm and reliable mounting method, such as brackets or screws, to prevent movement or tilting due to vibration or accidental impact . Ensure the box is level and securely fastened to the column.
