

Integrated optical power meter and red light pen

Article Overview

A combined optical power meter and red light pen is a handheld fiber-optic tool that measures optical signal power and detects fiber faults using a visual red laser, ideal for installation, maintenance, and troubleshooting.

Overview and Functionality

These devices integrate two essential fiber-optic functions in a single unit: optical power measurement (OPM) and visual fault location (VFL). The optical power meter measures absolute or relative optical power, helping technicians assess signal strength and loss, while the red light pen emits a 650nm laser to visually trace fiber continuity and locate breaks or faults. This combination reduces the need for multiple tools, streamlining field operations.

Key Features

- **Wavelength Coverage:** Many models, like the Y3 series, support multiple calibrated wavelengths (e.g., 850nm, 980nm, 1300nm, 1550nm, 1625nm) for single-mode and multimode fibers.
- **Connector Compatibility:** SC, FC, and ST interfaces are commonly supported, allowing versatile testing across different fiber types.
- **Power Measurement Range:** Devices typically cover ranges from -70 dBm to +10 dBm or higher, with high accuracy (± 0.2 dB) and fast response.
- **Laser Output and Test Distance:** Red light pens often provide 10–30 mW output, e...
