

Intelligent Low-Voltage System Cable Trays

Article Overview

Intelligent cable trays provide secure, scalable, and efficient pathways for low voltage systems, combining modular design, easy installation, and optimal cable protection.

Overview

Intelligent cable trays are engineered to support low voltage cabling such as data networking, fiber optics, security, and building automation systems. They are designed to maximize airflow, reduce electromagnetic interference (EMI), and simplify maintenance, ensuring long-term reliability and scalability for growing infrastructure needs .

Key Features

- **Modular and Adaptable Design:** Modern trays, like ABB's perforated trays and nVent CADDY's UNIKLIP system, allow cables to enter or exit at any point, supporting future expansion without major modifications .
- **Enhanced Installation Efficiency:** Systems such as UNIKLIP provide tool-free securement, pre-engineered corners, tees, and vertical transitions, reducing field labor and installation time .
- **Cable Protection and Safety:** Wire mesh trays, like Legrand's Cablofil series, feature Safe-T-Edge designs to prevent cable fraying and protect installers from sharp edges, while solid-bottom trays offer EMI shielding and protection against dust and moisture .
