

# Ireland LPO optical module SFP

## Article Overview

LPO (Linear Pluggable Optics) SFP modules are low-latency, energy-efficient optical transceivers designed for high-density, short-reach connections, available from suppliers in Ireland.

### What is LPO Technology

Linear Pluggable Optics (LPO) are optical transceivers that shift signal processing from the module to the host device, replacing the traditional DSP with high-linearity analog components like transimpedance amplifiers (TIA) and driver chips . This design reduces latency, power consumption, and cost per link, making LPO ideal for AI/ML clusters, GPU fabrics, and hyperscale data centers where high port density and low latency are critical . LPO modules are compatible with modern high-speed data center architectures but require host ASICs capable of handling digital signal processing.

### Specifications and Standards

The 100G-DR-LPO specification defines 100 Gb/s per lane PAM4 optical interfaces over single-mode fiber with up to 500 m reach . LPO modules support multiple lanes (1, 2, 4, or 8) and are available in QSFP, QSFP-DD, OSFP, and SFP form factors . They comply with IEEE 802.3 and OIF CEI-112G-LINEAR-PAM4 standards, ensuring interoperability with supported platforms . LPO modules are optimized for short-reach, high-density connections, while DSP-based optics remain preferable for longer or less predictable links ....
