

Irish Trough Type Cable Tray

Article Overview

The Irish Trough Type Cable Tray is a steel trough-style tray designed to provide continuous support and protection for medium-weight cables while limiting unauthorized access.

Overview

Trough-type cable trays are engineered to offer continuous support along the length of the cable run, making them ideal for installations where cable protection and security are priorities. They are typically constructed from steel, providing strength and durability, and are often used in industrial, commercial, and utility environments where mechanical protection is essential. The "Irish" designation generally refers to a regional standard or specification for these trough trays, emphasizing robust construction and compliance with local electrical codes.

Design Features

- **Enclosed or semi-enclosed structure:** Unlike ladder or perforated trays, trough trays have solid or partially solid sides and bottoms, which limit cable access and reduce the risk of tampering or accidental damage.
- **Continuous support:** The tray provides a flat or slightly contoured base, ensuring cables are supported along their entire length, preventing sagging and maintaining proper bend radius.
- **Material and finish:** Typically made from galvanized or powder-coated steel, offering corrosion resistance and long-term durability in indoor and outdoor installations.
- **Load capacity:** Suitable for medium-weight power, control, and instrumentation ca...
