

Low-Temperature Installation Solution for Iran's PDU Fiber Optic Cabinet

Article Overview

For low-temperature environments, industrial and modular PDUs with IP55-rated enclosures and flexible mounting options provide reliable power distribution for fiber optic cabinets.

Recommended PDU Features for Low-Temperature Environments

- **Industrial-Grade Enclosures** PDUs designed for industrial use, such as Gcabling and Panduit SmartZone G5 systems, offer IP55 protection and UL Type 4/12 ratings, ensuring resistance to dust, moisture, and temperature fluctuations, making them suitable for colder climates .
- **Temperature Range and Environmental Tolerance** While standard PDUs typically operate between 0°C and 45°C, some industrial PDUs are thermally validated for environments up to 50°C, and their robust construction allows operation in lower temperatures with proper insulation and heating considerations . For Iran's colder regions, additional cabinet heating or insulation may be recommended to maintain optimal PDU performance.
- **Modular and Flexible Design** Modular PDUs, such as Olabs FiberFlex™ and Rittal PDUs, allow customized socket configurations, vertical or horizontal mounting, and flexible cable lengths, which simplifies installation in fiber optic cabinets and ensures compatibility with local power standards .
- **Monitoring and Management** Smart PDUs provide outlet-level monitoring, remote switching, and SNMP/Web interfaces, enabling IT managers to track power consumption and perform remote resets without exposing equipment to low-temperature stress . This is particularly useful in environments where physical acce...
