

Meteorological Instrument Power Distribution Box

Overview

The power distribution box (PDB) is an electrical cabinet that will be located at the back of the LST and Nectar cameras (see section 4)., from lightning) on the incoming power lines. System Distribution Box for Recording and Evaluating Weather Sensors WAGO Weather Station makes all relevant sensor data, such as temperature, precipitation, wind speed and light intensity, available for further processing and display in a visualization or a management system. Weather sensors from. Indication Lights: These provide visual availability and status of mains power supply. Each component plays a specific role. Smart DB boxes have extra parts like energy monitoring units and communication modules. High-quality materials and robust product designs ensure a reliable connection, signal transmission and power. One of the purposes of the World Meteorological Organization (WMO) is to coordinate the activities of its 188 Members in the generation of data and information on weather, climate and water, accord- ing to internationally agreed standards.
