

Mobile Optical Cable Subcontracting

Article Overview

Mobile optical cable subcontracting involves partnering with specialized manufacturers to produce optical fibers, cables, and related assemblies for telecom networks, often through centralized procurement or tendering processes.

Overview of Subcontracting in Optical Cable Manufacturing

Subcontracting in the optical cable industry allows telecom operators and system integrators to outsource the production of optical fibers, multi-conductor cables, ribbon cables, coaxial cables, and wiring harnesses to specialized manufacturers. Companies like PRODETICS offer comprehensive subcontracting services, including the production of electrical and electronic subassemblies, wiring harnesses, and cable assemblies tailored to client specifications . This approach helps operators scale production efficiently without investing in in-house manufacturing facilities.

Centralized Procurement and Tendering

Large telecom operators, such as China Mobile, conduct centralized procurement projects for optical fiber and cable products. For example, the 2025-2027 G.654E optical fiber and cable procurement project involves an estimated 22,900 fiber kilometers, with bidding shared among 2-3 suppliers and a maximum bid price limit . Similarly, ZTT secured a top position in China Mobile's 2025-2026 procurement, highlighting the importance of brand reputation, product quality, delivery reliability, and ESG performance in winning contracts . Companies interested in subcontracting opportunities can also monitor tender platforms like GlobalTenders, which aggregate optical fiber cable tenders and RFPs from public and private sources, providing acce...
