

# Optical Communication and Fiber Optic Communication Experiments

## Overview

This lab offers an immersive, web-based simulator that enables you to explore and experiment with key concepts in optical communication, such as signal transmission, fiber optics, modulation, and detection techniques. THEORY: Fiber optic links can be used for transmission of digital as well as analog signals. The transmitter module takes the input signal in electrical form and then transforms it into optical. This document summarizes 10 experiments on optical fiber communication: 1. Studying a 650nm fiber optic analog link and the relationship between input and received signals. Considered propagation of light in an optical fiber, the condition of total internal reflection at the core-cladding interface is. Availability of plastic optical fiber (POF) The plastic optical fiber used in some of these experiments is available for science distributors. It is a 1000micron (1mm) POF available from several suppliers.
