

Overseas Warehouse AOC Active Optical Cable OSFP

Overview

OSFP Active Optical Cables (AOCs) are high-speed interconnects for data centers, supporting up to 800 Gbps. Using the OSFP form factor, they offer low power, high signal integrity, and longer reach than copper, making them ideal for AI, HPC, and cloud networking. Our active optical cable assembly portfolio provides improved cable flexibility and longer reach as compared to both traditional passive copper and emerging active copper (ACC/AEC) solutions, supporting high performance computing, data center and networking interconnect applications. Engineered in the compact QSFP112 form factor, each AOC delivers an aggregate 800 Gb/s bandwidth. Pivotal Optics' Active Optical Cables (AOCs) are fully integrated, plug-and-play fiber assemblies designed for short- to medium-range high-speed data links—without the need for separate transceivers. Built with bonded multi-mode or single-mode fiber, these cables deliver secure, low-latency. The 400G OSFP to 2x 200G QSFP56 breakout active optical cables operate over multi-mode fibres (MMF). This breakout cable is compliant with IEEE 802.0, SFF-8679, SFF-8661, SFF-8636, and CMIS Rev.
