

Pof beam splitter

Overview

A PoF optical power splitter is a network device designed to distribute optical data signals together with centralized DC power to multiple downstream endpoints over PoF links. To address the demand for low-cost, low-loss, and environmentally friendly optical power dividers in short-range visible light communication (VLC) systems, a low-loss 1×2 Y-branch optical splitter based on the integration of a planar optical waveguide (POW) and plastic optical fiber (POF) is. Thorlabs offers a wide range of optical beamsplitters. Pellicle beamsplitters provide excellent. POF SPLITTER, 50/50, GHCP-4001, HFBR-4503z/4513z *NOTE: Splitters are made to order, please allow a lead time of 1-3 weeks. 1' 50/50 splitter POF Cable assembly, (Versitile-Red link) ESKA UL rated cable, OEM latching connectors, Fiberfin termination, labeled and Anti-static packed. Beamsplitters are also ideal for fluorescence applications, optical interferometry, or life science or semiconductor instrumentation.
