

Portable power distribution box with wiring for construction sites

Article Overview

Portable power distribution boxes, also known as spider boxes or temporary PDUs, safely distribute electricity across construction sites using industrial-grade wiring and connectors.

Overview

Portable power distribution boxes are temporary electrical hubs designed to deliver power from a main source to multiple devices and equipment on construction sites. They are essential for environments where permanent electrical infrastructure is unavailable or constantly changing. These boxes are mobile, flexible, and built to withstand harsh conditions such as dust, rain, and heavy foot traffic.

Key Components

- Enclosures: Weather-resistant, impact-resistant, and often rated IP67 to protect against dust and water immersion.
- Circuit Breakers: Provide overload and short-circuit protection for each circuit.
- Sockets/Outlets: Can include standard 120/240V single-phase or 120/208V and 277/480V three-phase outlets, depending on site requirements.
- Grounding: Ensures safety for personnel and equipment.
- Labeling: Clear identification of circuits and connections to reduce wiring errors.
