

Price of 288-core optical cable installation

Article Overview

Installing a 288-core optical fiber cable can cost approximately \$6 per foot for the cable itself, with total installation costs ranging widely depending on method, labor, and site conditions.

Cable Material Costs

A 288-core optical fiber cable is considered a high-count backbone cable, typically used for enterprise or campus networks. The material cost for such a cable can reach \$6 per linear foot or more for premium glass fiber with armored outdoor construction . Pre-terminated assemblies, which simplify installation, may increase the cost further due to factory termination and testing . Bulk purchases or standard indoor cables may reduce per-foot costs slightly, but outdoor armored cables designed for direct burial or harsh environments are at the higher end of the price range .

Installation Costs

Installation costs depend on several factors:

- Method: Underground trenching or bore work is more expensive than aerial or indoor conduit runs . Direct burial armored cables can reduce labor compared to running standard cable through conduit .
- Labor: Labor rates vary by region and project complexity. Typical fiber installation labor can range from \$1 to \$12 per foot, depending on route complexity, splicing, a...
