

Price of protective sleeve for distribution boxes

Article Overview

Protective sleeves for distribution boxes vary widely in price depending on material, size, and supplier, typically ranging from a few dollars per meter to higher costs for specialized or pre-cut industrial sleeves.

Types of Protective Sleeves

- **Cable and Electrical Sleeves** These are used to feed electrical cables, corrugated hoses, or pneumatic hoses through distribution boxes, switch cabinets, or machines. They prevent kinking, abrasion, and injuries from sharp edges, and often provide strain relief. Materials include polyolefin, silicone, fiberglass, and PVC, with options for heat-shrinkable or braided sleeves. Installation is usually tool-free, and sleeves can be pre-cut or supplied in rolls for targeted use (APSOparts) .
- **Mesh or Net Sleeving** Flexible polyethylene mesh sleeves protect delicate or irregularly shaped components during storage, handling, or transit. They are available in various diameters (6-200 mm) and sold per roll (50-250 meters). Mesh sleeves are reusable, resistant to grease, oils, and mild acids, and can tolerate temperatures from -40°C to +85°C (RAJAPACK, Datec Packaging) .
- **Insulating and Specialized Sleeves** For industrial or critical environments, sleeves may offer thermal, dielectric, or mechanical protection. Materials include silicone, fiberglass, polyester, and polyolefin. Some are certified for fire resistance (UL94-V0, EN 45545, FAR 25) and are pre-cut for rapid installation in hard-to-reach areas (ADDEV Materials) .
