

Procurement of Fire-Resistant Stainless Steel Cable Trays in North Africa

Article Overview

Fire-resistant stainless steel cable trays, typically made from 304L or 316L stainless steel, are available for rapid procurement in North Africa, offering corrosion resistance, durability, and compliance with IEC fire safety standards.

Material and Fire Resistance

For fire-resistant applications, stainless steel cable trays are preferred due to their high corrosion resistance, mechanical strength, and ability to withstand extreme temperatures . The most common grades are 304L and 316L, with 316L offering superior resistance to chemical and saline environments, which is particularly relevant for coastal or industrial areas in North Africa . Fire performance should comply with IEC 60332 and IEC 60695 standards, ensuring trays resist flame propagation and glow-wire ignition .

Procurement Considerations

When procuring cable trays, consider the following:

- **Compliance:** Ensure suppliers provide test reports for fire resistance and corrosion protection according to IEC standards .
- **Environment:** For industrial or chemical plants, stainless steel or FRP trays are recommended; for heavy loads, metallic trays are preferred .
- **Supplier Availability:** Companies like TSA Industries offer stainless steel trays with...
