

Production Standards for Cable Management Stands

Article Overview

Cable management stands must comply with IEC 61537 standards, ensuring structural integrity, corrosion resistance, and safe cable support in industrial and commercial installations.

Key Standards and Compliance

Cable management stands, including cable trays, ladders, and mesh trays, are governed primarily by IEC 61537:2023, which specifies requirements and testing for systems intended to support and accommodate electrical and communication cables . This standard ensures that cable support systems can safely carry mechanical loads, withstand environmental conditions, and allow proper cable arrangement. It does not cover conduit, trunking, or ducting systems, nor current-carrying parts .

Material and Corrosion Protection

Materials commonly used include steel and stainless steel, often with galvanization or other coatings to enhance corrosion resistance . Standards such as ISO 12944 and ISO 10289 categorize the expected lifetime and corrosion protection of components. Special attention is given to gap corrosion, where moisture and contaminants can accelerate metal degradation, particularly in narrow gaps or mixed-metal assemblies .
