

Rack-mounted fiber optic heat shrink tubing for rail transit

Article Overview

Fiber optic heat shrink tubing for rail transit provides durable protection for splices, ensuring mechanical strength, environmental resistance, and reliable optical performance.

Overview

Rack-mounted fiber optic heat shrink tubing is designed to protect and reinforce fiber optic splices in rail transit systems, where cables are exposed to vibration, temperature fluctuations, moisture, and mechanical stress. These tubes are typically installed in optical distribution frames, patch panels, or splice boxes mounted in racks along rail infrastructure ().

Key Features

- **Material Composition:** Most heat shrink tubes are made from cross-linked polyolefin with a hot fusion inner tube and a stainless steel or ceramic reinforced rod, providing mechanical strength and maintaining optical transmission properties ().
- **Environmental Protection:** Tubes offer moisture resistance, UV resistance, and thermal stability, ensuring reliable performance in harsh rail environments ().
- **Splice Protection:** They rebuild the fiber coating at the fusion joint, providing mechanical support and insulation to prevent signal loss or damage ().
- **Compatibility:** Available for single fibers, ribbon fibers, and multi-fiber splices, with customizable sizes and colors for identification and installation convenience ()....
