

Railway communication cabinet power distribution system 800mm depth

Article Overview

Railway communication cabinets with 800mm depth support integrated power distribution systems, optimized for 19" rack-mounted equipment, cable management, and railway-certified safety standards.

Cabinet Design and Dimensions

Railway communication cabinets with an 800mm depth provide sufficient space for mounting 19" rack equipment, including PDUs, network switches, and signaling electronics. Standard cabinets in this depth, such as the 42U SmartRack or Comms Express 800x800mm enclosures, allow extra room for side-mounted PDUs and vertical cable management, ensuring efficient airflow and organized cabling . These cabinets are typically constructed from heavy-duty steel with powder-coated finishes for durability and can support loads ranging from 600kg to over 1500kg, depending on the model .

Power Distribution Integration

Power distribution units (PDUs) in railway communication cabinets are often 0U or 1U vertical units, mounted along the side or rear of the cabinet to maximize usable space . The Zero-U mounting allows PDUs to be installed without occupying front rack space, providing flexible electrification for multiple devices. Cabinets may include pre-configured mounting rails and baying brackets to combine multiple cabinets in a row, facilitating centralized power management and structured cabling
