

Relay protection device renovation cycle

Overview

Abstract — This paper proposes the renovation criteria for protective relay in control and protection system within power substation. Industry Leading Life Cycle Policy ABB's products are designed for continuous evolution. It is ABB's goal to protect our customers' investment beyond the. Based on the electrical and mechanical durability of relays, select a relay that meets your equipment, load, and application requirements. By using dedicated relay sockets, it is also possible to reduce maintenance work and the risk of PCB damage at the end of the relay's service life. As the service life of these devices exceeds multiple decades, questions regarding when and how to strategically replace these relays are increasing. Ensuring that. The purpose of this document is to outline the proposed volumes of replacement and expenditure associated with protection relays owned by Energex during the regulatory period 2025-30, in accordance with the lifecycle management strategies detailed in the Asset Management Plan for Protection Relays.
