

Router to Fiber Optic to Router

Article Overview

To connect fiber optic internet to a router, you must use an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, which can then be linked to your router and optionally to a second router.

Required Equipment

- Optical Network Terminal (ONT): Converts fiber optic light signals into electrical signals compatible with routers, usually provided by your ISP .
- Fiber optic cable: Connects the ISP's fiber outlet to the ONT, typically with SC/APC or SC/UPC connectors .
- Ethernet cable (Cat6 or higher): Connects the ONT to your primary router and optionally to a secondary router .
- Router(s): Ensure the router has a Gigabit WAN port and supports the speeds of your fiber plan. Modern Wi-Fi 6 routers are recommended for optimal performance .

Step-by-Step Connection

- Install the ONT: Plug the fiber optic cable from the wall outlet into the ONT's input port. Power on the ONT and wait for the status lights to stabilize, indicating a successful connection to the ISP network .
- Connect the ONT to the Primary Router: Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the WAN port on your primary router. Power on the router and verify connectivity through the router's status lights or admin interface .
- Optional: Connect a Secondary Router:
- LAN-to-WAN method: Connect an Ethernet cable from a LAN port on the primary router to the WAN port of the secondary router. Configure the secondary router wit...
