

Size requirements for 24 distribution boxes

Article Overview

Standard 24-way distribution boxes typically measure around 18.5×14×5 inches (L×W×H) for surface-mount designs, with variations depending on manufacturer and IP rating.

Standard Dimensions

Most 24-way MCB or distribution boxes are designed to accommodate 24 standard 18mm modules, usually arranged in two rows of 12 modules each . Typical dimensions for surface-mounted boxes are approximately 18.5 inches in length, 14 inches in width, and 5 inches in height, though flush-mounted or IP65-rated boxes may vary slightly due to additional sealing or structural features .

Material and Protection

- **Material:** Commonly made from ABS or PC plastic, providing flame-retardant and impact-resistant properties .
- **IP Rating:** Indoor boxes often have IP40, while outdoor or weatherproof models can reach IP65, affecting overall size due to thicker walls and sealing .

Mounting and Installation

- **DIN Rail Compatibility:** Most 24-way boxes include TH35x7.5mm DIN rails for mounting circuit breakers and other modular components
