

Specifications of Steel Cable Tray Covers

Article Overview

Steel cable tray covers are available in various materials, finishes, and designs to provide protection, ventilation, and structural support for cable management systems.

Materials and Finishes

Steel cable tray covers are commonly manufactured from mild steel and stainless steel. Mild steel covers are typically pre-galvanized as standard or hot-dip galvanized after fabrication for enhanced corrosion resistance, while stainless steel covers are often grade 1.4404 (316L) for high corrosion resistance in harsh environments . Finishing options may include powder coating, anodizing, or PVC overlays to further protect against environmental exposure and improve aesthetics .

Design Types

Cable tray covers come in multiple designs to meet functional and environmental requirements:

- Flat covers: Ideal for indoor corridors and data centers where space is limited and aesthetics are important .
- Dome-shaped (hat) covers: Designed to shield overfilled trays and deflect debris, suitable for outdoor or overhead installations .
- Peaked and corrugated covers: Provide structural reinforcement without adding significant weight, often used in outdoor or seismic-prone areas .
- Finned covers: Enhance ventilation for industrial control panels
