

Sri Lanka Fiber Optic Cable Warning

Overview

Sri Lanka Telecom-MOBITEL (SLT-MOBITEL) has issued a critical public safety advisory urging citizens not to cut or tamper with fallen telecommunications cables. The warning comes as the country's leading telecom provider addresses growing concerns about public safety and network infrastructure. From the high-rise data centers of Colombo's financial district to the burgeoning tech parks in Kandy and the nationwide push for high-speed connectivity, the demand for reliable, high-bandwidth networks has never been greater. At the physical core of this revolution lies a critical component: fiber optic cables. This is the main goal of the Spectrum Master Plan. The Spectrum Master Plan provides a future roadmap for spectrum allocation as well as spectrum-related policy reviews that are anticipated to take place between 2023 and 2028. This report is developed by incorporating international best practices. There are five cable landing stations in Sri Lanka, owned by three telecom operators: Sri Lanka Telecom, Lanka Bell and Dialog Axiata. In 2013, the Sri Lanka Government awarded Sri Lanka Telecom the role of 'national backbone network'. As of early 2025, Sri Lanka has 29. ONT must be fixed in a way where the ports of the ONT are headed downwards. Use the Standard Connector/Angled.
