

Standard thickness of small plastic distribution boxes

Article Overview

Small plastic distribution boxes typically have wall thicknesses ranging from 1.5 mm to 3 mm, depending on size, material, and application standards.

Material and Construction

Most small distribution boxes are made from flame-resistant ABS plastic, which provides good insulation, impact resistance, and durability. The wall thickness is designed to balance mechanical strength, electrical insulation, and ease of installation. For compact boxes used in residential or commercial electrical installations, the typical wall thickness is around 1.5–2.5 mm, while slightly larger or more robust boxes may reach up to 3 mm.

Standards and Compliance

Plastic distribution boxes often comply with ISO 18616-1:2016, which defines rigid plastic boxes for transport and storage, and BS EN60439-3, which covers enclosures for low-voltage switchgear and controlgear. These standards ensure that the boxes are safe, durable, and suitable for modular electrical components. The thickness is chosen to meet mechanical and electrical safety requirements, including resistance to impact, heat, and flame.

Practical Considerations...
