

Swedish EPON equipment 400G

Article Overview

While 400G EPON is an emerging technology, Swedish companies like Siverts Semiconductors are actively developing high-speed optical components that could support next-generation EPON deployments.

EPON Overview

Ethernet Passive Optical Network (EPON) is a fiber-optic access technology standardized under IEEE 802.3ah/802.3av, designed to deliver high-bandwidth connectivity to end users. Traditional EPON systems support speeds up to 10G per Optical Line Terminal (OLT) interface, with point-to-multipoint architecture connecting multiple Optical Network Units (ONUs) via passive splitters. EPON provides benefits such as low operational costs, immunity to electromagnetic interference, and flexible network expansion .

400G Optical Technology

To achieve 400G speeds, optical networks rely on advanced transceivers and coherent optics. Modules like the QSFP-DD 400GBase-ZR support 400G Ethernet over single-mode fiber with distances up to 120 km, using DP-16QAM modulation and coherent intradyne reception. These transceivers are hot-pluggable and compliant with QSFP-DD Multi-Source Agreements (MSA), enabling interoperability across different vendors .
