

Switch optical port ONU

Overview

The ONU, a key device in a PON (Passive Optical Network), converts optical signals into electrical ones for users. It comes with various ports to suit different needs. This article uses the FS ONU TA1910-4GVC-W as an example to explain these ports and their connections in detail. Figure 1: the port. XPON STICK is an ONU with SFP interface, small and exquisite, plug and play, with good heat dissipation and shielding effects. Hot-swappable to work in the SFP slots of switches, cameras and other equipment, so that the whole machine can be directly connected to the GPON or EPON optical network. An ONU is a terminal device in a fiber-to-the-home (FTTH) network. This network is suitable for building. A GEAPON system usually consists of an OLT (Optical Line Terminal) at the service provider's central office and multiple ONU (Optical Network Units) or ONT (Optical Network Terminals) close to the end user as optical splitters.
