

T-type clamp models for tubular busbars

Article Overview

MGT T-type clamps and aluminum alloy T-connectors are widely used for tubular busbars in substations, offering secure clamping, easy installation, and compatibility with high-current applications.

Overview of T-Type Clamps

T-type clamps are specialized fittings designed to connect or support tubular busbars in substations and power distribution systems. They are primarily used to fix or hang busbars on insulators, ensuring stable electrical and mechanical connections while minimizing line loss and preventing damage to conductors. These clamps are suitable for aluminum or copper tubular busbars and are commonly installed at busbar terminals or junction points.

Common Models and Materials

- MGT T-Connectors / Clamps
- Made from hot-dip galvanized steel or aluminum alloy for corrosion resistance and durability.
- Designed for T-connections of tubular busbars, carrying current flow efficiently.
- Features hex-stop clamping bolts for one-wrench installation and cap screws for upright mounting.
- Lightweight, easy to identify, and simple to install.
- Aluminum Alloy Tubular Bus-Bar T-Connectors
- Manufactured using die casting and precision machining for high-quality electrical fittings
