

Tanzania Fiber Optic Communication

Article Overview

Yes, fiber optic transmission to Tanzania is fully possible, with extensive national and international connectivity already in place.

National Fiber Network

Tanzania has developed a robust National ICT Broadband Backbone (NICTBB), which currently spans over 13,820 kilometers and connects most districts across the country . As of 2024, 106 out of 139 districts were already connected, with the remaining 33 districts scheduled for completion within the year . The network is designed to provide high-speed internet access to both urban and rural areas, supporting services such as e-commerce, online education, fintech, and digital platforms .

International Connectivity

Tanzania's fiber network is linked to multiple international submarine cables, including SEACOM, EASSY, and soon 2-AFRICA . These connections enable Tanzania to access global internet infrastructure efficiently. Additionally, a cross-border terrestrial fiber link with Kenya has been established, connecting Dar es Salaam to Mombasa and providing access to Kenya's eight subsea cable connections . This redundancy ensures reliable connectivity even if Tanzania's coastal landing stations experience disruptions .
