

Temporary power distribution box gb

Article Overview

A temporary power distribution box is a portable unit that safely distributes electricity from a single source to multiple outlets for construction sites, events, or emergency setups.

Overview

A temporary power distribution box (also called a spider box or portable power distro) is designed to provide multiple electrical outlets from a single power source. These boxes are commonly used on construction sites, outdoor events, industrial projects, and emergency power situations where permanent wiring is unavailable or impractical.

Key Features

- **Amperage and Voltage:** Typical units range from 20A to 50A, with voltages of 125/250V AC. Some heavy-duty models support up to 800A for industrial applications.
- **Outlets:** Boxes often include multiple GFCI-protected outlets (e.g., 6–8 duplex 20A outlets) and may feature twist-lock or locking receptacles for secure connections.
- **Inlets:** Power input is usually via a twist-lock connector (e.g., L14-30P for 30A, 125/250V single-phase) compatible with generators, utility drops, or dryer/range outlets.
- **Safety:** Each outlet typically has individual circuit breakers, and the boxes are designed to meet OSHA, NEC, and UL standards. Many are weatherproof (NEMA 3R or IP65/67 rated) for outdoor use
