

Temporary power distribution box lighting

Article Overview

Temporary power distribution boxes provide portable, safe, and reliable power for lighting and equipment in construction, events, and emergency situations.

Overview

Temporary power distribution boxes, also known as spider boxes or portable PDUs, are designed to distribute electricity from a main source to multiple devices and lighting setups in locations where permanent power infrastructure is unavailable or under maintenance . They are widely used on construction sites, outdoor events, disaster recovery operations, and industrial projects .

Key Features

- **Portability and Durability:** These boxes are built with rugged enclosures to withstand harsh environments, including rain, dust, and heavy handling .
- **Multiple Outlets:** They provide several outlets for connecting tools, machinery, and industrial lighting, often including both standard 120V/240V single-phase and 120/208V or 277/480V three-phase options .
- **Safety Features:** Modern units include GFCI protection, overcurrent breakers, weatherproof covers, and high-voltage shutoff protection, ensuring safe operation in temporary setups .
- **Flexibility:** Many units allow easy extension and pluggable connections, making them adaptable to changing site requirements
