

The fiber optic cable cannot be removed from the optical module

Article Overview

Carefully release the latch mechanism, pull the connector straight along its axis, and avoid twisting or applying lateral force to prevent damage to the fiber or module.

Safety Precautions

Before attempting removal, ensure safety to protect both yourself and the equipment:

- Power down or disable the port if possible to reduce laser exposure risk and prevent link errors .
- Wear a grounded ESD wrist strap and work on an ESD-safe surface to prevent electrostatic damage to the module .
- Avoid looking directly into the fiber port or connector, as even low-power lasers can be harmful to the eyes .
- Do not bend the fiber beyond its minimum bend radius, as this can cause permanent damage .

Step-by-Step Removal

- Identify the connector type (LC, SC, SC/APC, MTP, MPO, etc.) and locate the latch or ejector mechanism on the module .
- Grasp the connector body, not the cable itself, to avoid stressing the fiber .
- Release the latch or ejector lever completely. For SFP modules, pull the lever until it clicks to unlock the transceiver
