

# Traditional common fiber optic connectors

## Article Overview

The most common fiber optic connectors are SC, LC, ST, FC, and MPO, each designed for specific applications and performance requirements.

### SC (Subscriber Connector)

The SC connector is a square-shaped, push-pull connector widely used in FTTH deployments, data centers, and telecom networks. It features a 2.5mm ferrule and is available in both single-mode and multimode versions. SC connectors are known for low insertion loss, durability, and ease of installation, making them suitable for high-speed data transmission and applications requiring frequent connections and disconnections .

### LC (Lucent Connector)

The LC connector is a miniaturized version of the SC connector with a 1.25mm ferrule, ideal for high-density applications such as modern data centers. It uses a latch mechanism similar to an RJ45 plug and supports both duplex and simplex configurations. LC connectors are compact, reliable, and widely adopted for single-mode and multimode fibers .

### ST (Straight Tip)

The ST connector features a bayonet-style twist-lock mechanism and is primarily us...
