

Tunnel cable tray supporting brackets

Article Overview

Tunnel cable tray installation brackets are specialized supports designed to securely mount cable trays and ladders along tunnel walls and ceilings, ensuring stability, safety, and compliance with fire and mechanical standards.

Types of Brackets

- **Suspension Brackets:** Wall-mounted supports for cable trays, mesh trays, and ladders, specifically designed for tunnel construction and tested to DIN 4102-12 for fire resistance .
- **Heavy Duty Wing Brackets:** Work with radial channels and cable ladders to provide multi-discipline cable management in tunnels, suitable for high mechanical loads .
- **U, I, and STRUT Systems:** Provide flexible fastening and suspension options for cable trays, allowing multi-layer routing and precise alignment along tunnel walls .

Materials and Protection

Brackets are typically made from stainless steel or corrosion-resistant metals to withstand tunnel conditions, including moisture, chlorides, and mechanical stress from passing trains or environmental factors . Fire-resistant coatings and compliance with standards like DIN 4102-12 or local equivalents ensure continued operation of critical systems during fire events .

Installation Workflow

- **Marking and Positioning:** Establish horizontal and vertical reference lines using laser chalk lines or levels, based on tunnel design and rail elevation
