

Types of Sudanese electricity meter distribution boxes

Article Overview

Sudanese electricity meter distribution boxes include single-phase and three-phase meter boxes, surface or recessed installations, and materials ranging from plastic to metal, designed for residential, commercial, and industrial use.

Overview

Electricity meter distribution boxes in Sudan serve as protective enclosures for utility meters and the first point where the external grid connects to a building's internal electrical system. They ensure safety, prevent tampering, and allow easy maintenance and meter reading . The choice of box depends on the power supply type, installation environment, and load requirements.

Types by Power Supply

- **Single-Phase Meter Boxes:** Common in homes and small shops, designed for 230–240 V supply. Typically made of durable plastics like polycarbonate, these boxes are compact, corrosion-resistant, and suitable for light-duty applications .
- **Three-Phase Meter Boxes:** Used in larger buildings, factories, and commercial setups with 400 V or multi-phase power. Constructed from stronger materials such as glass-reinforced plastic (GRP) or metal, they provide higher impact resistance and heat tolerance for industrial conditions .
