

UPC Optical Splitter

Article Overview

UPC (Ultra Physical Contact) refers to a type of fiber optic connector with a flat, polished endface that ensures low insertion loss and reliable signal transmission in optical splitters.

What is UPC?

UPC stands for Ultra Physical Contact, a connector type used in fiber optic systems where the fiber endface is polished flat to achieve a very close physical contact between fibers. This design minimizes back reflection (return loss) and ensures stable optical signal transmission, making it ideal for telecom, Ethernet, and FTTH networks where high signal integrity is required .

UPC in Optical Splitters

In optical splitters, such as PLC (Planar Lightwave Circuit) splitters, UPC connectors are commonly used on the output fibers. For example, a 1×16 SC/UPC pigtail splitter divides a single input signal into sixteen outputs, each terminated with a UPC connector . The flat physical contact of UPC connectors ensures compatibility with standard patch panels and reduces signal loss, which is critical in Passive Optical Networks (PON) .

Comparison with APC

UPC connectors differ from APC (Angled Physical Contact) connectors, which have an 8-degree angled endface. While APC connectors provide higher return loss (>60 dB)...
