

What are the widths of cable trays

Article Overview

Standard cable tray widths typically range from 50 mm to 1000 mm, with common sizes including 100 mm, 200 mm, 300 mm, 450 mm, 600 mm, and 900 mm, depending on application and cable volume.

Standard Width Ranges

Cable trays are manufactured in nominal inside widths that determine cable capacity, with the outside width slightly larger due to side rail thickness . Standard widths vary by region and application:

- Narrow trays (50–150 mm): Used for instrumentation, control wiring, or small cable counts in commercial or process industries .
- Medium trays (200–600 mm): Suitable for general power distribution in commercial buildings and moderate industrial applications .
- Wide trays (600–1000 mm): Designed for heavy industrial installations, data centers, or utility projects where large numbers of power or fiber optic cables are routed together .

Widths by Tray Type

Different tray types may influence usable width:

- Ladder trays: Usable interior width must accommodate cables in a single layer, ensuring proper support and ventilation .
- Solid-bottom trays: Allow slightly less cable fill (up to 90% of tray width) due to li...
