

What is a WM distribution box

Article Overview

A WM distribution box is a wall-mounted enclosure designed to safely house and organize electrical or fiber optic connections for distribution purposes.

Overview

A WM distribution box is a type of wall-mounted enclosure used in industrial, commercial, and telecommunications applications to distribute power, signals, or fiber optic connections efficiently and safely. It serves as a central hub where incoming power or data lines are branched out to multiple circuits or customer connections.

Construction and Features

WM distribution boxes are typically made from carbon steel or stainless steel, with powder-coated or brushed finishes for durability. They feature:

- One-piece welded body for strength and stability
 - Hinged doors with secure latching mechanisms (single or double doors depending on size)
 - Foamed-in-place gaskets for dust and contaminant protection
 - Zinc-plated, adjustable mounting panels for easy installation of internal components
 - Protection ratings suitable for industrial environments, often meeting NEMA or IP standards
- Sizes vary, accommodating different numbers of circuits or fiber connections, and some models include sloped tops to prevent water accumulation....
