

What is an MPO trunk optical cable

Article Overview

An MPO trunk optical cable is a high-density, pre-terminated fiber optic cable that integrates multiple fibers into a single plug-and-play assembly for backbone connections in data centers and high-speed networks.

Overview

An MPO (Multi-Fiber Push-On) trunk cable is designed to carry dozens to hundreds of optical fibers within a single cable, providing a compact, high-capacity backbone solution for modern data centers and enterprise networks . It is factory-terminated with MPO connectors on both ends, eliminating the need for field splicing and enabling plug-and-play deployment . These cables serve as the "fiber optic highway," connecting main distribution areas (MDA) to equipment distribution areas (EDA) and supporting high-speed parallel transmission for 400G, 800G, and beyond .

Structure and Design

MPO trunk cables typically feature:

- Multi-fiber MPO connectors: Each connector can house 8, 12, 16, or 24 fibers, allowing a single trunk to carry up to 192 fibers or more .
- Ribbon or loose-tube fiber arrangement: Fibers are grouped internally for efficient routing and minimal cable diameter .
- Microcore construction with strength members: Aramid yarn or similar materials provide tensile strength, while protective jackets safeguard fibers during installation .
- Customizable lengths: Common lengths range from 30 m to 100 m or more, depe...
