

What is an antistatic cable tray

Overview

The anti-static tray is one kind of ESD trays. Made for electronics packaging as well as general purpose small parts packaging. Tray lid is standard and fits all size plastic trays. Its surface resistivity is between $10E6$ - $10E12 \Omega \text{ cm}$. Clear, transparent coating with Clevios™ produces surfaces with an antistatic, static dissipative, or conductive finish with a precisely tunable sheet resistances (SR) in the range of $10E4 - 10E10 \text{ Ohm/sq}$. After being assembled, displays and related parts and components for smartphones and tablets. Anti-static finishes are important when it comes to avoiding electrostatic discharge (ESD), which may cause destruction of all kinds of delicate electronic parts. This comprehensive guide will look at their forms, works, uses, and choice criteria. A cable tray system forms a structural framework.
