

What kind of explosion-proof distribution box

Article Overview

Explosion-proof distribution boxes are specially designed electrical enclosures that safely house electrical components in hazardous environments, certified for ATEX and IECEx compliance.

Overview

Explosion-proof distribution boxes are electrical enclosures engineered to prevent ignition of surrounding explosive atmospheres caused by sparks or heat from internal electrical components. They are commonly used in industrial settings with combustible gases, vapors, or dust, such as chemical plants, oil and gas facilities, and mining operations .

Key Features

- **Materials:** Typically made from stainless steel (AISI 304L or 316L), aluminium, or GRP/polyester, providing durability and corrosion resistance .
- **Flameproof Design:** Enclosures are designed with flameproof joints and specialized hinge structures to prevent flame propagation and protect the integrity of the box during opening and closing .
- **Customizable Layout:** Many models allow modular assembly, enabling multiple boxes to be combined or installed freely to save space and accommodate various distribution systems .
- **Internal Components:** Can include motor starters, switches, push buttons, voltmeter...
